## Product Information

iwis supplies a wide range of top-quality accumulation chains. Accumulation chains are used for conveying goods on lines that stop and start intermittently while the chain continues to run. The external rollers on one side of the chain mesh with the sprocket teeth to transmit drive power; on the other side they support the chain in the guide profile.

### ELITE highlights

- In order to prolong their service life and guarantee smooth running, ELITE accumulation chains are treated with a special highviscosity, high-adhesion chain oil before leaving our factory. The special application process ensures that only a thin film of oil remains on the outside of the chain.
- ELITE chain plates with optimum geometry are precisionformed and heat-treated
- ELITE pins are smooth and have an extra hard surface for increased wear resistance
- Choice of hardened steel or plastic transport rollers
- Plastic transport rollers are generally usually using the material Vestamid
- Double Speed chains – twice the conveying speed due to transport rollers turning on chain guides
- Also available in stainless steel
